

the car won't turn. the more air pressure in the balloon the more momentum you will have. You will have ~~the~~<sup>air</sup> energy coming out of the balloon. The wheels and ax play a major role. When I made my car, my wheels in straight with made the car turn and give slower time.

— Were your predictions correct. —  
you need to re-state your predictions  
can you provide data from  
your speed trials to  
support your findings?
